Informacija Turističkoj zajednici Grada Malog Lošinja

Poštovani,

Želimo vas obavijestiti da u našoj ordinaciji, u suradnji s Poliklinikom Lab Plus u Zagrebu, provodimo serološka testiranja na antitijela za virus *CoVid-19*. Testovi se rade metodom ECLIA tvrtke La Rosche Laboratories. Testiraju se ukupna antitijela tipa IgM, IgG i IgA . Ukoliko je test pozitivan tada se uzorak testira na analizatoru firme Abbott Laboratories.

Ovim se testom može se utvrditi da li je osoba bila u kontaktu s virusom i da li je trenutno bolesna. Prisutnost ovih antitijela govori o imunom odgovoru osobe na zarazu virusom.

Uzorak za testiranje uzima se iz venske krvi.

Za testiranje je potrebno dogovoriti termin na telefon

(051) 667 272 ili (098) 259 592

Laboratorijske pretrage u ordinaciji radimo od 8:30 h do 11:00 h utorkom, srijedom i četvrtkom.

Nalaz testa je gotov za 48 sati. Nalaz izdajemo na hrvatskom ili na engleskom jeziku.

Cijena testa je 350,00 kn.

mr.sc.dr.Anamarija Margan Šulc

U Malom Lošinju 01.06.2020.

Information to the Tourist Office of the Town of Mali Lošinj

We would like to inform that at our office, in collaboration with the Polyclinic Lab Plus in Zagreb, we provide serology testing on antibodies for the *CoVid-19* virus. A test sample is analyzed in the ECLIA method by the La Roche Laboratories whereupon the antibodies type IgM, IgG and IgA are being tested. Should a finding be positive, a sample is further tested on an Abbott Laboratories' analyzer.

The test could ascertain whether or not has a person been in the contact with the virus and whether is a person presently sick. The presence of these antibodies tells about an immune response of a person to an infection by the virus. A test sample is drawn from the vein blood.

The testing is available by appointment only, so please call:

(051) 667-272 or (098) 259-592

The blood samples are taken at our medical office on Tuesdays, Wednesdays and Thursdays during the hours of 8.30 AM to 11 AM.

Test results are available in 48 hours and written in English language.

The price of testing is 350,00 KN.
